

Virtual Spout

The **High-Flow Virtual Spout** offers a very discreet alternative to the traditional filler spout. It is factory-installed on an inside wall of the tub and is “stubbed-out” under the tub with 3/4" copper pipe so a plumber can tie the incoming water to the port. Fill rate is 20 GPM at 45 PSI with Wilkins Dual Check Valve installed. *See below for more information.*

Because the Virtual Spout is installed below the water level of the tub, special consideration is needed to prevent backflow into the fresh water supply. The Virtual Spout will always come with a Wilkins Dual Check Valve installed on the system (**Figure 1**). Some areas of the country require additional backflow prevention above the water line of the tub. An atmospheric vent suitable for in-wall installation (Acme In-Wall Vent) comes with the purchase of the Virtual Spout, but requires access through the wall and a means of catching any spilled water, should the atmospheric vent be activated (**Figure 2**). **Please check local codes, as some areas of the country require a deck-mounted backflow prevention device** (see page C-24).

An alternative, and simpler installation option, is the Breda Valve, which also meets backflow prevention codes where the device is required to be above the water line (**Figure 3**). The Breda Valve eliminates some of the excess piping required for the in-wall type of backflow prevention because it is factory-installed on the tub deck. It is available at an additional charge as listed on page C-24. Some tub models will not accommodate the Breda Valve on the flange of the tub. In these cases, the valve will be shipped loose for field installation. There are also some applications where a Breda Valve may not be a viable alternative. Please contact MTI with any questions regarding application or installation. Consult your local plumbing code for backflow prevention requirements in your area before ordering.

The Virtual Spout cannot be combined with MTI's Fill-Flush cleaning system.

Please review the Owner's Manual / Installation Guide provided with tub for complete installation instructions. The manual is also available at mtibaths.com.

Please indicate desired location on spec sheet when ordering.
